

Credit Name: Chapter 7

Assignment Name: MySaving & digitExtractor

Error Log Entry

What error message did you encounter (if any)?

I couldn't connect the two classes. and I put variables outside of the do-while and switch loop, so they couldn't get the variable.

What unexpected behavior did your program exhibit?

the names of the methods are all underlined.

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

couldn't call a void method

Include a screenshot of specific lines of code.

How did you fix the issue?

Asked chatgpt to help me to fix it

Provide the corrected code or solution using a screenshot.

```
choice = userInput.nextInt();

switch (choice) {
    case 0:
        break;
    case 1:
        System.out.println("The total amount in your account is: " + piggybank.getTotal());
        break;
    case 2:
        System.out.println("Enter the amount for penny:");
        piggybank.addPenny(userInput.nextInt());
        break;
    case 3:
        System.out.println("Enter the amount for nickel:");
        piggybank.addNickel(userInput.nextInt());
        break;
    case 4:
        System.out.println("Enter the amount for dime:");
        piggybank.addDime(userInput.nextInt());
        break;
    case 5:
        System.out.println("Enter the amount for quarter:");
        piggybank.addQuarter(userInput.nextInt());
        break;
    case 6:
        piggybank.takeMoneyOut();
        System.out.println("All money removed from bank.");
        break;
    default:
        System.out.println("Invalid choice.");
}
```
